4<sup>th</sup> year Project : ***“DESIGN AND FABRICATION OF VICE”***

In this project we are fabrication cam vice. It works on principle of eccentric cam mechanism. The main features of cam vice are promotes mass production, can hold regular

jobs, flexibility, reduce fatigue, etc. Cam was designed to hold jobs at higher pressure. The other part were designed to hold the jobs in rigid condition. Cam is suitable for mass production. It is possible to hold irregular components also, and similar components also, and similar components can be very quickly.

This innovation has made the more desirable and economical. This project is play an important role for reducing mass production time and also reducing cost of mass production and this designed with the hope that it is very much economical and helpful to workshops, small and medium scale industries.
